Footnotes and important risk warnings

¹The average holding period is calculated by the investment manager in accordance with the requirements of the UCITS V directive, and derived from the reference portfolio (see footnote 6 below) turnover over the last 12 months as of the end of the reporting month, less all subscriptions and redemptions. This figure is adjusted so as not to double count buys and sells. It is then inverted so that, for example, 50% turnover would equate to a 2-year average holding period and derived turnover over the last 12 months.
